# Questions for this Session

## Why?

Docker is great on Linux, why do we need it on Windows?

## Options, options, options

When to use what?

## Demos, demos, demos

See things in action

# Overview

Available Options and Tools

# Microsoft Containers

## Docker client on Windows

In Windows shell

In Bash shell ([Bash on Ubuntu on Windows](#))

# Demo

## Docker Client

Docker Client in  
Windows Shell

Ubuntu subsystem for  
Windows

Not Docker, not Hyper-V  
Pico processes

Bash on Ubuntu on  
Windows

Advantage: [Completion](#)

# Microsoft Containers

## Docker client on Windows

In Windows shell

In Bash shell ([Bash on Ubuntu on Windows](#))

## Linux containers on Windows

[Docker for Windows](#)

## Windows containers on Windows

[Windows Server containers](#)

[Hyper-V containers](#)

Docker support on Windows Server 2016 and [Windows 10](#)

# Microsoft Containers

## Ready-made containers

For Linux and Windows

See [Docker Hub](#) (e.g. [Azure CLI](#), [.NET Core](#), [PowerShell](#), [IIS](#), [SQL Server on Linux](#), etc.)

## Containers on Azure

Templates (e.g. [Docker on Ubuntu](#)) and drivers from Microsoft (details later)

[Docker Machine](#) with [Azure driver](#)

Run clusters (DC/OS, Docker Swarm, Kubernetes) with [Azure Container Service](#)

## Visual Studio Support

[Visual Studio Tools for Docker \(VS2017\)](#)

[VSTS Docker Extension](#)

# Demo

SQL Server

Linux

Windows

# Linux

```
docker run -e ACCEPT_EULA=Y -e SA_PASSWORD=P@ssw0rd!123 -m  
4096MB -p 1433:1433 -d microsoft/mssql-server-linux
```

# Windows

```
docker run -d -p 1433:1433 -e sa_password=P@ssw0rd!123 -e  
ACCEPT_EULA=Y microsoft/mssql-server-windows-developer
```

# SQL Server

# Strengths and Limits

## Windows Server vs. Hyper-V Containers

Managed almost identically  
(Docker and PowerShell)

Difference: Isolation level

More details in [docs](#)

## Version Compatibility

Server Containers: Must match

Hyper-V Containers: Need not  
match

Source: Mark Fussell (Microsoft), Azure Service Fabric -  
Build always-on, hyper-scalable, microservice-based cloud  
applications

# Demo

## Isolation

Windows Hyper-V Containers

```
# Run Hyper-V container
docker run -it --rm --isolation=hyperv microsoft/nanoserver
cmd /c ping localhost -t
```

```
# Show vmwp.exe process on host -> virtual machine
```

```
# Run Windows Server container
docker run -it --rm --isolation=hyperv microsoft/nanoserver
cmd /c ping localhost -t
```

```
# Show ping process on host -> kernel reuse
```

# Isolation

Windows Hyper-V Containers

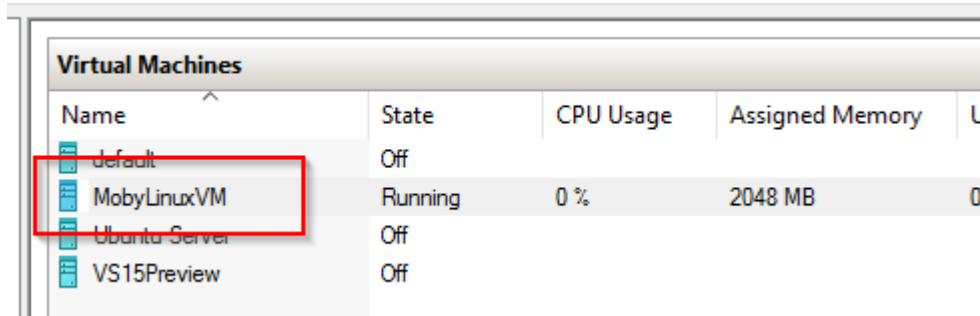

# Linux on Windows

Running Linux containers on Windows

# Linux on Windows

## Use Docker for Windows

Uses Hyper-V to run Linux with Docker

The screenshot shows the 'Virtual Machines' section of the Windows Hyper-V management console. A table lists the following VMs:

Name	State	CPU Usage	Assigned Memory	U
default	Off			
MobyLinuxVM	Running	0 %	2048 MB	0
Ubuntu Server	Off			
VS15Preview	Off			

Run Docker client on Windows or Linux

# Demo

## Docker for Windows

### Docker for Windows UI

- Settings

- VM in Hyper-V

### Container scenarios

- Interactive container

- Volume mapping

- Port mapping

### Microsoft-provide image

- .NET on Linux

```
# Run interactive ubuntu container
docker run -it --rm ubuntu /bin/bash
```

```
# Run postgres with volume mapping
docker run -d --name postgres -v c:\temp\data:/dbdata -e
POSTGRES_PASSWORD=P@ssw0rd! -e PGDATA=/dbdata postgres
# Show content of mapped volume on Windows
```

```
# Run mongo with port mapping
docker run -d --name mongo -p 27017:27017 mongo
# Use mongo client under Windows to access mongo in container
```

```
# Run .NET Core on Linux
docker run -it --rm microsoft/dotnet /bin/bash
mkdir /demo
cd /demo
dotnet new console --framework netcoreapp1.1
ls -la
dotnet restore
dotnet run
```

```
# Option: Show .NET Core with VSCode and
#           Volume mapping
```

# Demo

## Prerequisites

Docker for Windows installed and configured

Don't forget to share drive in Docker for Windows settings!

```
# nginx.conf
events {
    worker_connections 4096; ## Default: 1024
}

http {
    server {
        listen 80;
        location /global-azure-bootcamp-2017/ {
            root /usr/share/web;
        }
        location / {
            return 301 /global-azure-bootcamp-2017/;
        }
    }
}

# Dockerfile
FROM nginx:alpine
COPY . /usr/share/web/global-azure-bootcamp-2017
COPY nginx.conf /etc/nginx/nginx.conf
```

Demo

Jekyll

# Windows on Windows

Running Windows containers on Windows

# Windows on Windows

## OS Support

Windows Server 2016

Windows 10 (Hyper-V Container)

Nice integration with Docker for Windows on Windows 10

## Windows Server Container

## Hyper-V Container

Additional isolation layer

Runs inside of Windows Nano Server VM

```
docker run -it --rm --isolation=hyperv microsoft/nanoserver
```

# Demo

## Windows Container

### Docker on Windows 10

Nano Server

### Docker on Windows Server 2016

Full Server

Nano Server

Remote Docker (Linux and  
Windows) client

### Container scenarios

Interactive container

[Dockerfiles on Windows](#)

Volume mapping

Ready-made container (.NET)

*# Ping Docker host on Windows Server*

```
docker -H tcp://1.2.3.4:2375 info
set DOCKER_HOST=tcp://1.2.3.4:2375
docker info
docker ps -a
docker images
```

*# Run 'dir' inside a short-lived Nano Server container*

```
docker run --rm microsoft/nanoserver cmd /C dir
```

*# Run existing IIS image (source: Microsoft)*

```
docker run -d -p 80:80 microsoft/iis
```

*# Volume mapping*

```
echo Hello > c:\temp\greeting.txt
docker run --rm -v c:\temp:c:\somedir microsoft/nanoserver cmd
/C type \somedir\greeting.txt
```

# Demo

## Prerequisites

Windows Server with  
Container support

See also sample Dockerfile  
<https://github.com/rstropek/DockerVS2015Intro/blob/master/dockerDemos/07-win-container-nano-server/Dockerfile>

```
FROM microsoft/windowsservercore
MAINTAINER rainer@timecockpit.com
```

```
RUN dism.exe /online /enable-feature /all /featurename:iis-  
webserver /NoRestart
```

```
RUN echo "Hello World - Dockerfile" >  
c:\inetpub\wwwroot\index.html
```

```
CMD [ "ping", "-t", "127.0.0.1" ]
```

# Dockerfile

```
FROM microsoft/aspnet  
COPY . /inetpub/wwwroot
```

# Dockerfile

ASP.NET 4.6

# Windows on Windows

## Configuration via *daemon.json*

Details see [Microsoft docs](#)

## Support for Dockerfiles

Windows shell

Powershell support

Details see [Microsoft docs](#)

## Swarm-support is coming

Available to Windows 10 insiders already

Details see [blog post](#)

## PowerShell for Docker

Alternative to Docker CLI

# Docker on Azure

Running containers in Azure

# Docker on Azure

## Docker support in *Azure Resource Manager* (ARM)

[Extension for Docker on Linux](#)

[Ready-made ARM-templates](#) (e.g. [Docker on Ubuntu](#))

## Azure driver for *Docker Machine*

## Azure Container Services (ACS)

## Storage

[Docker Volume Driver for Azure File Storage](#)

# Demo

## Containers in Azure

Docker Machine

Azure Driver

ARM with Docker

Using Quickstart Template

Volume driver for Files

```
docker-machine create --driver azure --azure-subscription-id  
00000000-0000-0000-0000-000000000000 doc16-demo  
# Show result in Azure Portal
```

```
# Create volume on Azure files
```

```
docker volume ls  
docker volume create -d azurefile --name myvol -o share=doc16  
docker volume ls  
docker run -it --rm -v myvol:/data ubuntu /bin/bash  
  cd /data  
  echo Hello > greeting.txt  
# Show result in Azure Portal
```

# Demo

## Prerequisites

Docker Machine installed  
Docker Driver for Azure Files  
installed and configured

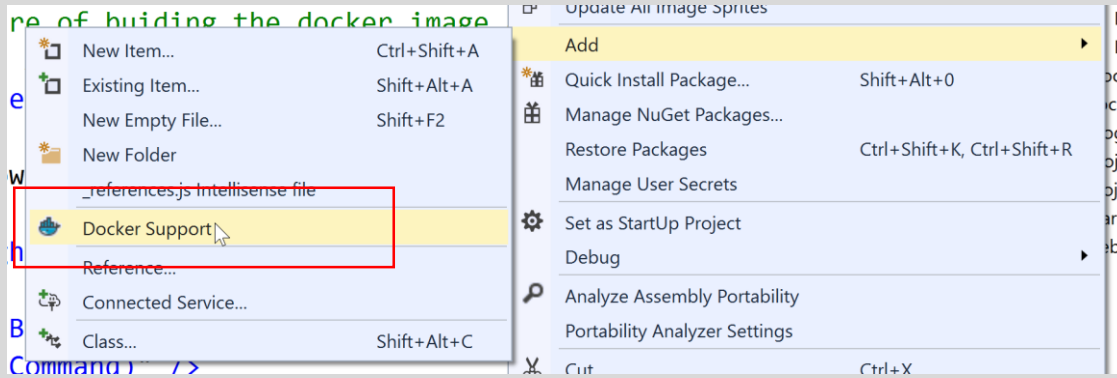

# Developer Tools

Visual Studio support

# Visual Studio

## Docker Tools for Visual Studio

Docker support for Visual Studio Code

# TFS/VSTS

## Docker extensions for TFS/VSTS

The screenshot shows the Visual Studio Marketplace interface. The top navigation bar includes 'Visual Studio', 'Visual Studio Team Services' (highlighted in pink), and 'Visual Studio Code'. A search bar contains the text 'docker'. Below the search bar, it says '3 Results' and 'Showing: Build'. Three extension cards are displayed. The first two cards, 'Docker Integration' by Microsoft and 'Docker build task' by Lambda3, are enclosed in a red rectangular box. The third card, 'Container Security' by Aqua Security, is not boxed. Each card shows the Docker logo, the extension name, the publisher, download count, a brief description, a star rating, and a price/status label.

Extension Name	Publisher	Downloads	Description	Rating	Status
Docker Integration	Microsoft	1.2K	Build, push, run or deploy Docker images and multi-container Docker applications.	4 stars	FREE
Docker build task	Lambda3	141	Adds a build task that enables Docker actions.	5 stars	PREVIEW
Container Security	Aqua Security	32	Vulnerability scanner for container images	5 stars	PREVIEW

# Summary

# Summary

## Microsoft ❤️ Linux and containers

Linux on Windows

Windows on Windows

All kinds of containers on Azure

## For dev/test and prod

Containers on Windows 10 for devs

Windows Server 2016 for Windows prod

Azure Container Service for Linux prod

## Workshop

# Q&A

Thank you for attending!
